Abstract	AB	[] Es wird ein Gerät zur Applikation von akustischen Stoßwellen für die medizinische Anwendung beschrieben, bei welchem eine oder mehrere Therapieköpfe austauschbar mit einer Versorgungseinheit gekuppelt werden können. Die Therapieköpfe vereinigen eine Druckimpulsquelle, ein flüssiges Medium und eine Fokussierungseinrichtung in einer geschlossenen Einheit.

		<p>[EN]</p> <p>The pressure pulse application unit reacts on a liquid medium, with a focussing unit, which focusses the percussion waves produced in the liquid medium on a treatment place and with a supply unit. The pressure pulse source, the liquid medium and the focussing unit are combined in a closed therapy head (3). At least one coupling (5) is provided, for the detachable connection of one or more therapy heads with the supply unit (1). The therapy heads have different focussing characteristics or acoustic penetration depths. The different penetration depth is realised by different coupling attachments. The attachments consist of a closed water cushion or a plastic body e.g. of polyurethane.</p>
